

VATSAL VACHHANI

vatsalvachhani46@gmail.com

SUMMARY

Python-focused Software Developer with strong interest in data science and data technologies. Experienced in data analysis, data processing, and backend logic using Python, Pandas, and NumPy. Worked on real-world projects involving network traffic analysis, recommendation systems, and data-driven applications. Also brings hands-on experience in cross-platform mobile development using Flutter, REST API integration, and performance optimization. Passionate about leveraging data to build intelligent and scalable software solutions..

SKILLS

Python, Matplotlib, JavaScript, PyTorch, HTML, Dart, CSS, Power BI, MySQL, VS Code, MongoDB, GitHub, Database Management, Android Studio, Pandas, Google Colab, NumPy

EXPERIENCE

Intern

- Developed cross - platform mobile applications using Flutter & Dart following MVVM / clean architecture principles.
- Designed and implemented responsive UI screens using Flutter widgets, Material UI, and custom components.
- Integrated REST APIs to fetch, display, and submit dynamic data.
- Implemented state management using Provider / setState.
- Worked with form validation, navigation, and local storage.
- Debugged and optimized application performance, fixing UI and logic - level bugs.

EDUCATION

01/2026 B.Tech — Computer Science and Engineering GPA:
8.42

01/2022 HSC (GSEB) GPA:
57 %

01/2020 SSC (GSEB) GPA:
66%

PROJECTS

Network Traffic Detector (Python)

- Built a network traffic monitoring tool to capture and analyze live network packets.
- Used PyShark for packet sniffing and Pandas for data processing and analysis.
- Exported analyzed traffic data to Excel for offline inspection and visualization.
- Technologies: Python, PyShark, Pandas, Excel

Contact Manager Mobile App (Flutter)

- Developed a mobile application to add, update, and delete contacts efficiently.
- Implemented persistent local storage to retain contact data across app restarts.
- Designed a clean and responsive UI using Flutter widgets. - Technologies: Dart, Flutter, Shared Preferences, Android Studio

Student Event Recommendation App

- Developed a full-stack event recommendation application using Flutter for the mobile frontend and JavaScript for application logic.
- Implemented interest-based event recommendations, allowing users to discover relevant events.
- Enabled users to view event details and directly register/apply through clickable event cards within the app.
- Built basic admin-side functionality to manage events and automate event data updates.
- Designed and tested the application using Android Studio, ensuring smooth navigation and performance.

Advanced Demand Forecasting System (Python, Scikit-learn, Streamlit)

- Developed a machine learning-based demand forecasting system to predict future sales with historical data.
- Applied Polynomial Regression to capture non-linear sales trends and performed feature engineering on date data.
- Evaluated model performance using MAE and custom accuracy metrics.
- Built an interactive Streamlit dashboard for real-time forecasting and visualization.

PROJECTS (IN PROGRESS)

AI - Powered Customizable Jersey Store — "Drip It" (Ongoing)

- Developing an AI - based platform for custom sports jersey design and virtual try - on.
- Allows users to customize jerseys with colors, logos, and names using AI assistance.
- Integrating computer vision and AI models for realistic jersey visualization. - Technologies: Python, AI/Computer Vision, Web Technologies (in progress)

HOBBIES AND INTERESTS

- Actively involved in sports and physical fitness activities.
- Passionate gamer with experience as a professional esports athlete.
- Enjoy traveling and exploring new places and cultures.

CERTIFICATIONS AND INTERNSHIP

- AWS Certified Cloud Practitioner (course completed).
- Flutter Internship at iCoders Solutions Pvt. Ltd.
